

CPS — Cross-epoch out-of-sample phase test | Split: 1914
 $T_{\text{hyp}} = 35.1 \text{ yr}$ | Fisher p (epoch 1+2 combined) = 0.5652 [not significant]
 Out-of-sample corr $p = 0.3635$ | Null: AR(AIC) surrogates, $B=2000$

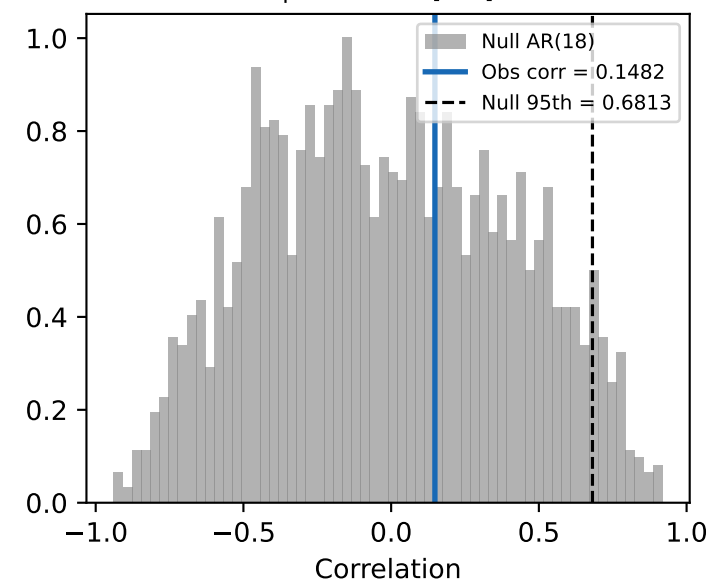

(A) Epoch-fold: 1816–1913
 AR(19), $p = 0.8655$ [n.s.]

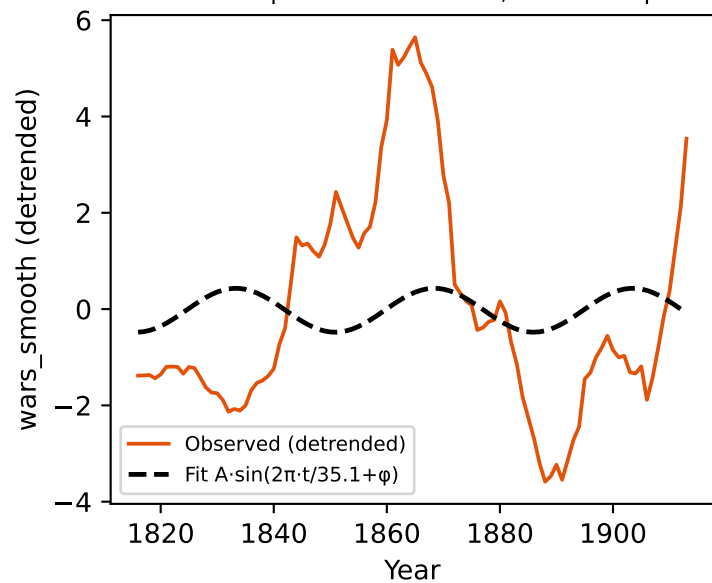

(B) Epoch-fold: 1914–2007
 AR(18), $p = 0.2635$ [n.s.]

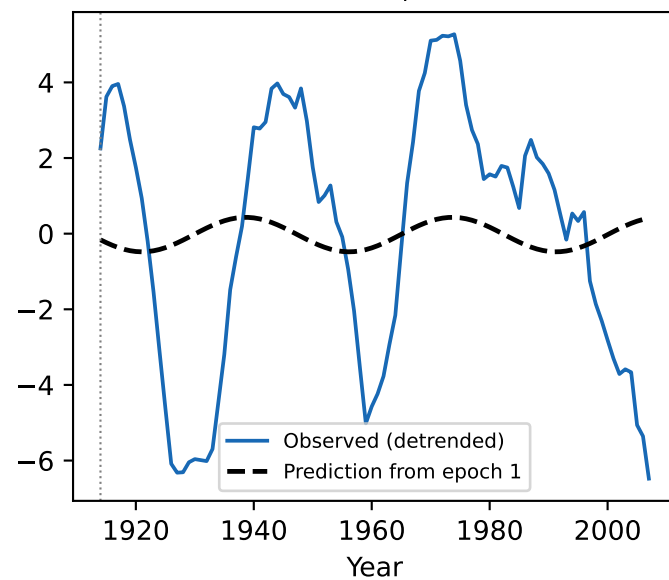

(C) Out-of-sample corr (epoch 2)
 $p = 0.3635$ [n.s.]

(D) Sinusoid fit — epoch 1 (1816–1913)
 Phase and amplitude locked here, tested in epoch 2

(E) Out-of-sample prediction — epoch 2 (1914–2007)
 corr = 0.1482, $p = 0.3635$

(F) Scatter: pred vs obs (epoch 2)
 corr = 0.1482
