

CPS — Cross-epoch out-of-sample phase test | Split: 1914
 $T_{\text{hyp}} = 35.1 \text{ yr}$ | Fisher p (epoch 1+2 combined) = 0.6844 [not significant]
 Out-of-sample corr p = 0.5415 | Null: AR(AIC) surrogates, B=2000

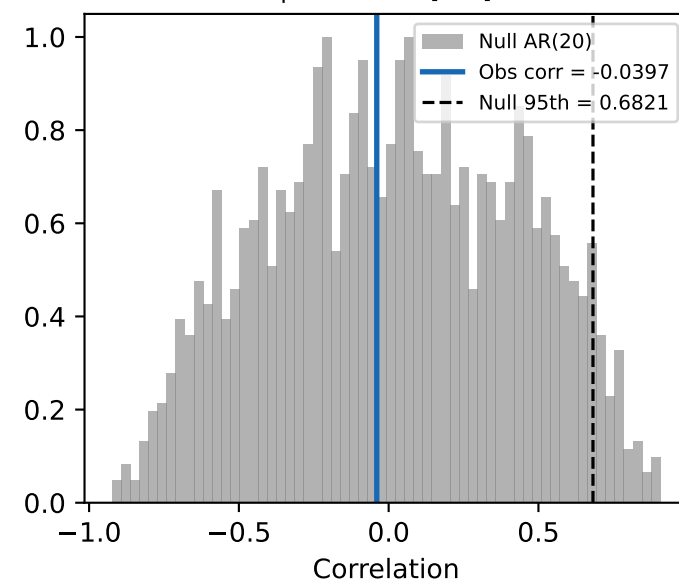

(A) Epoch-fold: 1816–1913
 AR(19), p = 0.8655 [n.s.]

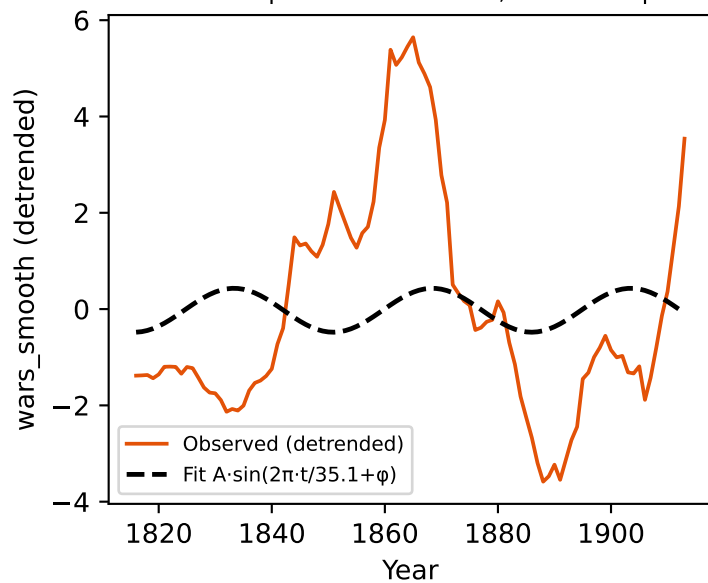

(B) Epoch-fold: 1914–2026
 AR(20), p = 0.3695 [n.s.]

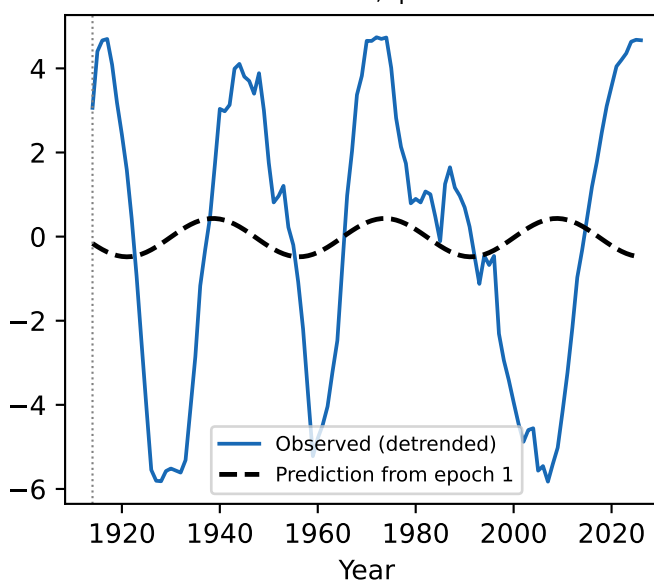

(C) Out-of-sample corr (epoch 2)
 p = 0.5415 [n.s.]

(D) Sinusoid fit — epoch 1 (1816–1913)
 Phase and amplitude locked here, tested in epoch 2

(E) Out-of-sample prediction — epoch 2 (1914–2026)
 corr = -0.0397, p = 0.5415

(F) Scatter: pred vs obs (epoch 2)
 corr = -0.0397
