

CPS — Epoch-folding phase-coherence test for ~36-year war cycle [AIC null]
Null: AR(p) surrogate wars_raw → MA(11) → fold at T_hyp = 35.1 yr
Tests PHASE STABILITY (not amplitude) — aligned with Triptych model claim

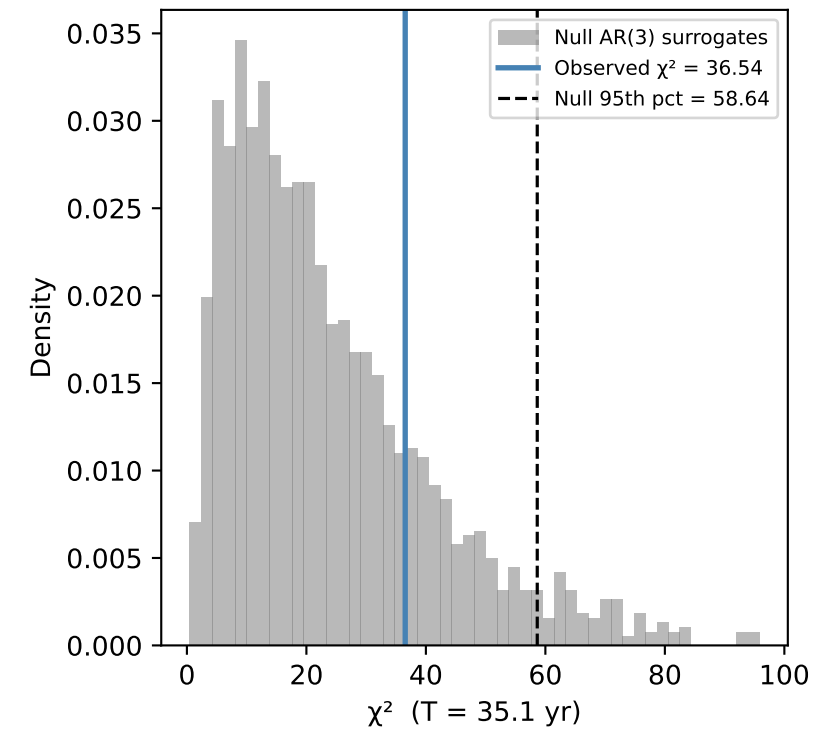

(A) Folded profile — Full 1816–2007
 $\chi^2 = 36.54$, $p = 0.197$ [n.s.]

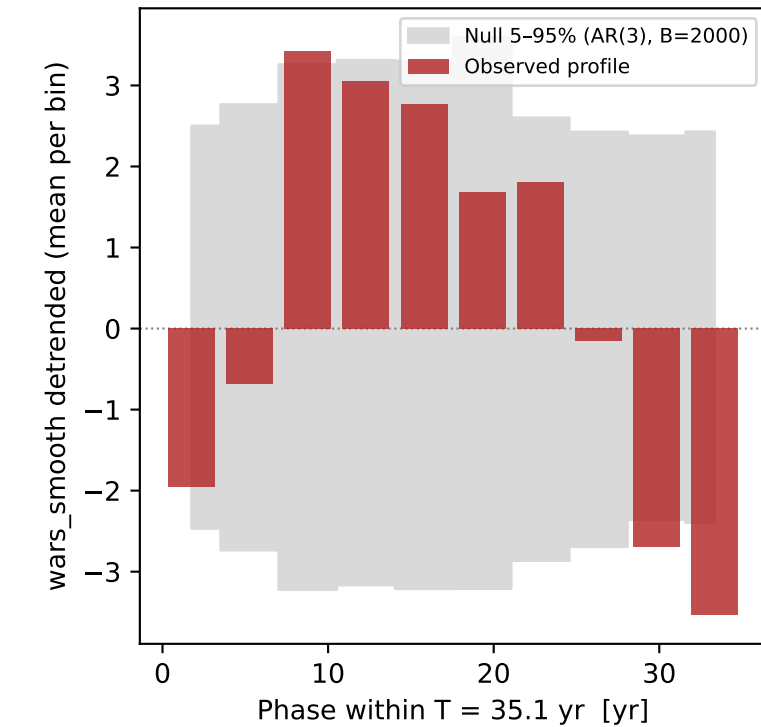

(B) Period scan — Full 1816–2007
 $\chi^2(T_{\text{hyp}}=35.1) = 34.41$ | Scan max at T=36.5 yr

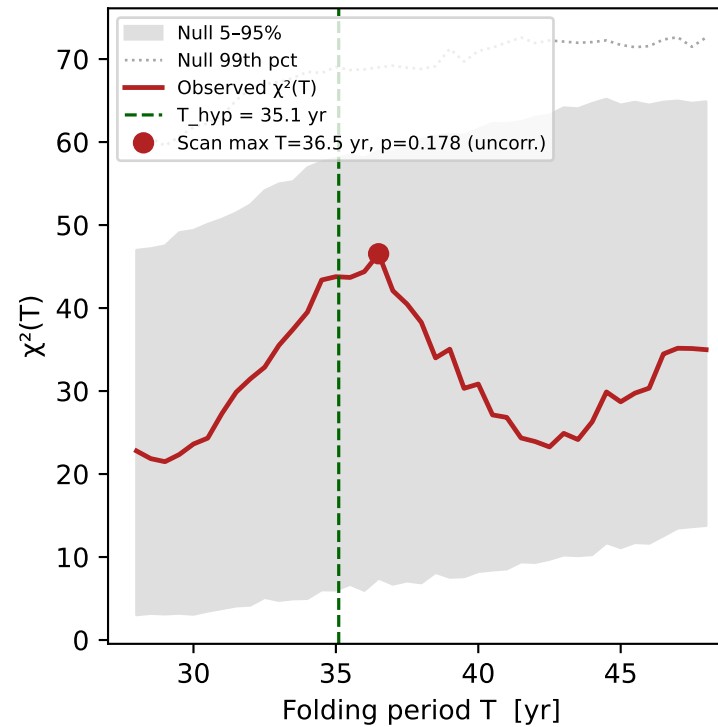

(C) Null distribution — Full 1816–2007
 $p = 0.1965 \rightarrow$ not significant

(A) Folded profile — Post-WWI 1918–2007
 $\chi^2 = 45.13$, $p = 0.163$ [n.s.]

(B) Period scan — Post-WWI 1918–2007
 $\chi^2(T_{\text{hyp}}=35.1) = 43.78$ | Scan max at T=36.5 yr

(C) Null distribution — Post-WWI 1918–2007
 $p = 0.1625 \rightarrow$ not significant
